WHERE VISION TAKES FORM

A dynamic team of enthusiastic structural engineers and designers, dedicated to crafting spaces that are not only robust and functional but also inspire creativity and innovation. We seamlessly merge technical proficiency with practical wisdom to create structures that prioritize safety, efficiency, and alignment with architectural vision and user requirements.

Structural Integrity

Design safe, reliable Structural systems

Technical Expertise

Apply engineering principles and best practices

Functional Design

Create spaces that meet user needs

Collaborative Insight

Integrate architecture and practical feedback

Our Services

High-Rise Structures & Residential

We specialize in resilient high-rise and residential design, delivering safe, innovative, and resource-optimized structures that elevate the urban experience.

Industrial Projects

Crafting robust and efficient manufacturing facilities customized to your unique operational requirements, prioritizing safety and sustainability at every stage.

Institutional & Commercial

Facilities such as schools, hospitals, and office buildings designed to optimize usability and structural integrity while maintaining aesthetic appeal.

Strengthening & Retrofitting

Revitalize current structures to fulfill new functional needs, strengthen them with cutting-edge standards, and prolong their lifespan using inventive reinforcement methods and materials.

We also assist with quantity estimation, construction support, and coordination for seamless execution.

At **FormX**, we don't just design structures — we craft lasting solutions that reflect stability, creativity, and precision. Always open to fresh ideas and complex challenges, we believe every structure has a story — and we're here to engineer it right.

G+2 Industrial Facility

Vapi, Gujarat

Total Area

66000 sq. ft.

No of Floor

G + 2

Services Provided

Structural Design with
machine foundation design

Description

The plastic manufacturing plant located in Vapi features a G+2 floor design, with the first floor planned as a removable mezzanine that can be assembled or dismantled according to needs. It showcases an attractive blend of RCC and steel structures, incorporating a steel roof and cladded walls instead of the conventional terrace and side walls.

PEB WAREHOUSE

Kheda, Gujarat

Total Area

90000 sq. ft.

No of Floor

Mezzanine + Roof

Services Provided

Structural PEB Design

Description

The PEB mezzanine structure, which supports the machine load above ground, has been designed using steel columns sized to fit onto the existing small RCC pedestals. Additionally, the design incorporates a double-sloped roof featuring a centrally located pipe rack with appropriate connection details. Fabrication drawings have also been supplied for each member.

High-Rise Structures & Residential Projects

G+ 2C + 12Apartment

Pune, Maharashtra

Total Area

80000 sq. ft.

No of Floor

G + 2C + 12

Services Provided

Structural Design

Description

The redevelopment design for the G + 2C+12 apartments has been completed with a value engineering approach, emphasizing cost-effectiveness and maximizing parking efficiency

Residential Bungalow

Surat, Gujarat

Total Area

5300 sq. ft.

No of Floor

G + 2

Services Provided

Structural Design

Description

The design of 7BHK bungalow has been carefully planned, considering large cutouts, architectural aesthetics, and spacious slabs covering the rooms without intermediate beams. Additionally, in certain areas, wider beams are incorporated to comply with depth restrictions.

Industrial Projects

CHEMICAL STORAGE

Indore, Gujarat

Total Area

8000 sq. ft.

No of Floor

G + 1

Services Provided

Structural Design with Report

Description

The chemical storage and QC room for Aarti Industries has been designed to meet mechanical specifications, including the submission of all structural calculations in accordance with the latest IS codes. Additionally, the adjacent Piperack is supported by the QC building to optimize the overall design cost-effectively.

INDUTRIAL SHED EXPANSION

Valsad, Gujarat

Total Area

50000 sq. ft.

Scope

Extension of PEB Shed

Services Provided

Structural Design with Strengthening

Description

An extension of the existing Peb shed has been completed by connecting it to the current structure. The existing design was reviewed in accordance with the latest IS code, and strengthening measures were proposed as needed. By integrating with the existing structure, space was conserved, resulting in a more cost-effective project overall.

Commercial & institutional Projects

Office Building

Senegal, South Africa.

Total Area

4000 sq. ft.

No of Floor

G + 1

Services Provided

Structural Design with
Project management

Description

This contemporary office project features a robust reinforced frame designed to support a multi-material facade of HPL wood panels and horizontal cladding. A key highlight is the engineered entrance canopy, which utilizes a hybrid column system and a reinforced concrete pedestal to provide a striking, cantilevered architectural statement.

Skill development center

Sorathur, Tamil Nadu

Total Area

28000 sq. ft.

No of Floor

Ground Floor

Services Provided

Structural design

Description

This project demonstrates a sophisticated blend of vernacular materiality and modern structural engineering. Our team optimized the load-bearing capacity of Compressed Stabilized Earth Block (CSEB) masonry to support a high-performance, lightweight canopy.

Specialized Projects

Renovation & Strengthening

Structural assessment and strengthening design for existing structures:

- NDT testing to determine material condition
- Beam-jacketing and column strengthening
- Load reassessment for additional usage
- Steel Structure strengthening

Solar Panel Mounting

Structural vetting for rooftop solar installations:

- Wind uplift checks as per IS 875 Part 3
- Panel frame anchorage design
- Load transfer analysis for interior finishes

Water tank design

Ongoing Projects

Industrial Manufacturing facility at Valsad

G+3 RCC + Steel manufacturing facility, with steel removable mezzanine floor at 2nd level.

Pre-Engineered Warehouse

Logistics facility in Vapi with foundation detailing is ongoing with vendor coordination for PEB superstructure.

Underground Water Tank

300 KL twin-compartment community infrastructure in Junagadh, focusing on crack control and hydrostatic pressure checks.

Pedestrian Foot Over Bridge

18.5m single-span steel truss bridge supported on RCC piers across railway tracks in Botad.

Strengthening of Existing industrial shed for crane load.

Strengthening of existing industrial shed for addition of 10T crane. Strengthening
